

Nivetha Jayakumar

Software Engineer

San Jose, CA | +1 646-328-8397 | nivethajayk@gmail.com | linkedin.com/in/nivetha-jay | github.com/nivethajay27

SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++, C#, Swift, SQL, HTML/CSS
Frameworks: React, React Native, Node.js, Express, Flask, Next.js, Django, Spring Boot
Backend & Systems: REST APIs, Microservices, Distributed Systems, System Design
Databases: PostgreSQL, MongoDB, Firebase, SQLite, Elasticsearch
Cloud & DevOps: GCP, AWS, Jenkins, Docker, Kubernetes, CI/CD, Vercel, Render
Tools & Other: Figma, Jira, Flutter, Postman, LLM APIs (OpenAI, Groq, Hugging Face), Android Studio, NLTK, Scikit-learn, Unity

WORK EXPERIENCE

WORK ORDER WIZARD, San Jose, CA (Remote) Nov 2024 – Dec 2025

Founding Software Engineer(Business Product Manager)

- Built and scaled real-time mobile/web applications and REST APIs using **React + Typescript, React Native (Expo), Python(FastAPI) , Firebase, and GCP**, reducing API latency by 35% and enabling seamless data sync across clients.
- Identified a gap in work order tracking workflows and led the design and development of a real-time system that improved visibility and streamlined operations for end users.
- Integrated AI-powered features using **LLM APIs (OpenAI/Groq)** to summarize work orders and surface key insights, improving user efficiency and data accessibility.
- Owned the end-to-end product lifecycle, from prototyping in **Figma** to production, driving roadmap decisions aligned with user needs, business goals, and engineering constraints.
- Leveraged user analytics to inform product decisions, boosting usability by 45%.
- Collaborated with executive leadership to define and refine product vision, goals, and roadmap, creating a compelling value proposition tailored to target markets during the prelaunch phase.

CISCO, San Jose, CA

Aug 2022 – April 2024

Software Engineer II

- Engineered and developed **core web products** and scalable automation dashboards and ML-backed analytics modules used by 2000+ engineers across Cisco's engineering divisions, for system performance optimization.
- Built and maintained **full-stack features** using **React + Typescript, HTML, CSS, Python (Flask), and MongoDB**, enabling real-time data visualization, analytics, and automation workflows.
- Architected **end-to-end web infrastructure**, from API design and database integration to CI/CD pipelines with **Jenkins, Docker and Kubernetes** improving deployment reliability and product scalability.
- Implemented **Java**-based data ingestion and analytics pipelines, improving processing speed and enabling faster system performance insights across engineering teams.
- Led performance and usability initiatives that increased process efficiency by **30%** and reduced production downtime by **25%**, collaborating with global teams to define requirements and launch new tools.

FRESH DIGITAL, Chennai, IN

Jul 2020 – Sep 2020

Full Stack Developer

- Built a user interface using **MeteorJS, HTML, and CSS** for an **AI-driven analytics and sentiment analysis dashboard** powered by **MongoDB** hosted on GCP infrastructure.
- Developed **machine learning-based sentiment classification modules** using pre-trained **NLTK and Scikit-learn** models to categorize customer feedback as positive, negative, or neutral.

TAMIL NADU E-GOVERNANCE AGENCY, Chennai, IN

Dec 2019 – Apr 2020

Artificial Intelligence & App Developer Intern

- Designed AI-driven chatbot features for the 'Uzhavan' agriculture app (**Java**) for plant disease detection and farmer support using NLP-based interaction flows and structured agricultural datasets.
- Developed 'TNIRT', an AI-enabled mobile app (**C++**) for automated public complaint classification and tracking workflows.

EDUCATION

MS in Computer Science (Computer Vision, Graphics, Interaction & Robotics) | Columbia University | NYC, NY | May 2022

B Tech in Computer Science Engineering | SRM Institute of Science & Technology | Chennai, India | May 2020

PROJECT

AI-Powered Personalized Portfolio Platform

- Engineered a full-stack AI-powered portfolio web app that tailors profiles and project highlights for each recruiter and job role, with shareable session links and one-click PDF export.
- Developed a **React + TypeScript** frontend and **FastAPI + Python** backend, integrated **Groq API** with automatic fallback, used **SQLite** for session history, and deployed on **Vercel and Render**.
